5 SIGNS THAT YOUR GUT HEALTH NEEDS SOME HELP

- 01.** Tummy issues (bloating, upset tummy, gas, digestion issues, loose bowel, reflux, food intolerance, heart burn, IBS)
- 02.** Chronic stress (poor sleep/insomnia, headaches, nausea, dizziness)
- 03.** Mental health (anxiety, depression, brain fog, memory issues)
- 04.** Skin complaints (breakouts, rosacea, dull/uneven skin tone, eczema)
- 05.** Using Antibiotics/auto immune issues (unfortunately, prescription antibiotics whist great for killing infection - can also upset the good and bad bacteria balance in our gut, Hashimoto's, arthritis, psoriasis, Crohn's chronic pain)

Chances are that you said "Yes, that's me!!" to a few of the above questions. You are not alone!

The thing is, all of the above can negatively effect your good bacteria in your gut, giving you symptoms of bloating, poor digestion and constipation and so much more

Have you ever looked at your gut health?

Think of the gut lining, like a gatekeeper. It allows things to go in and out of the blood stream.

The gut is responsible for 70% of the immune system - it's where most infections and illnesses start. Poor gut health causes inflammation, which is a component of a number of diseases. See more info below...

Healthy gut = healthy you!

True health starts from the inside out. What happens on the insides, shows on the outside. So, get your insides glowing, for your outsides to glow too!
